SAMPLE TEST RESUME - placeholder file for portfolio testing only. Replace before publishing.

Professional Summary

Developer-minded quality engineer focused on building reliable, user-friendly software. Experienced with test automation, API validation, SQL-based data checks, debugging workflows, and full-stack portfolio projects. Comfortable turning product requirements into stable application behavior and clean user experiences.

Technical Skills

Languages	Java, JavaScript, TypeScript, SQL, Swift, Python
Frontend	React, Next.js, HTML, CSS, Tailwind CSS, responsive UI
Testing	UI testing, API testing, Postman, regression testing, defect triage, test planning
Tools	Git, GitHub, Jenkins, Jira, Confluence, Xcode, VS Code

Experience

Software Test Engineer - Sample Financial Technology Company

Toronto, ON | 2024 - Present

- Designed and executed functional, regression, UI, and API tests for web-based financial workflows.
- Used SQL queries to validate data changes, investigate defects, and confirm release readiness.
- Collaborated with developers, product owners, and analysts to clarify requirements and debug issues before production release.
- Supported monthly release testing, defect triage, and production issue investigation in an Agile environment.

Full-Stack Development Intern - Sample Software Studio

Remote / Toronto, ON | 2023

- Built and updated web application features using JavaScript, React, Node.js, and REST API patterns.
- Improved internal tooling and supported bug fixes across frontend and backend components.
- Practiced clean Git workflows, pull requests, code reviews, and iterative feature delivery.

Projects

TTC Route Alerts - iOS App

- Built a SwiftUI app that lets users save TTC routes and view live service alerts for only the routes they care about.
- Integrated GTFS-Realtime alert data, local persistence, route matching logic, severity states, and refresh controls.

Retro Portfolio - Next.js Website

- Created a professional portfolio website using Next.js, TypeScript, and Tailwind CSS with a custom retro CRT computer interface.
- Structured the site with separate pages for About, Experience, Projects, Skills, and Contact.

Education

Bachelor of Computer Science - Sample University

Coursework: software engineering, databases, web development, algorithms, testing, and cloud fundamentals.
